## ASP.NET debugging enabled

Severity	Low
Type	Validation
Reported by module	Scripting (ASP-NET_Debugging_Enabled.script)

### Description

ASP.NET debugging is enabled on this application. It is recommended to disable debug mode before deploying a production application. By default, debugging is disabled, and although debugging is frequently enabled to troubleshoot a problem, it is also frequently not disabled again after the problem is resolved.

### Impact

It may be possible to disclose sensitive information about the web sever the ASP.NET application.

### Recommendation

Check References for details on how to fix this problem.

## Possible sensitive directories

Severity	
Type	Validation
Reported by module	Scripting (Possible_Sensitive_Directories.script)

## Description

A possible sensitive directory has been found. This directory is not directly linked from the website. This check looks for common sensitive resources like backup directories, database dumps, administration pages, temporary directories. Each one of these directories could help an attacker to learn more about his target.

## Impact

This directory may expose sensitive information that could help a malicious user to prepare more advanced attacks.

## Recommendation

Restrict access to this directory or remove it from the website.

## Session Cookie without Secure flag set

Severity	Low
Type	Informational
Reported by module	Crawler

### Description

This session cookie doesn't have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL channels. This is an important security protection for session cookies.

### Impact

None

### Recommendation

If possible, you should set the Secure flag for this cookie.

## Password type input with autocomplete enabled

Severity	Informational
Type	Informational
Reported by module	Crawler

## Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

## Impact

Possible sensitive information disclosure

## Recommendation

The password autocomplete should be disabled in sensitive applications.

To disable autocomplete, you may use a code similar to:

```
<INPUT TYPE="password" AUTOCOMPLETE="off">
```
